

Additive Delivery

SOLUTIONS

through efficient and effective additive delivery

Liquid supplements are practical and highly effective carriers for feed additives. In grazing situations, delivery of these products through the lick tank allows producers to take advantage of the benefits they offer without having to handle cattle, invest additional time and labor, or inventory and dose small amounts. In mixed rations, liquids support better distribution of additives throughout the feed, promoting more uniform intake. And here, too, inclusion at the plant rather than at the farm simplifies inventory, measurement, and mixing of these low-inclusion ingredients.

A wide range of additives, with the potential to positively impact animal health, performance, and efficiency, can be included in QLF supplements. Not all additives are available in all QLF feeds. Specific regulations regarding pH, shelf life, suspension agents, agitation requirements, and feed methods may apply.

In Lick Tanks and Bale Treatments

QLF offers a practical opportunity to utilize these management tools, backed by the convenience of self-feeding and the relatively consistent intakes of liquid supplements:

- ◆ Specific levels or sources of trace minerals and vitamins
- ◆ QLF Fescue Enhancer®
- ◆ Micro-Aid® (Yucca shidigera)
- ◆ Yeast, yeast fractions, yeast culture
- ◆ Fungal extracts
- ◆ Enzymes
- ◆ Altosid® (horn fly control)
- ◆ Safe-guard (dewormer)

Force-Fed Supplements

These medicated products are also available in appropriate QLF feeds:

- ◆ Bovatec®
- ◆ Cattlyst®
- ◆ Gainpro®
- ◆ Rumensin®
- ◆ Optaflexx®
- ◆ Zilmax®
- ◆ HeiferMax® / MGA®
- ◆ Tylan®
- ◆ Deccox®
- ◆ ClariFly®
- ◆ Rabon®
