

A close-up photograph of two young corn seedlings growing in dark, rich soil. The seedlings have several green leaves, some showing a slight yellowing at the base. The background is blurred, focusing attention on the plants.

LIQUID CARBON BASED

**L - CBF 7-21-3 MKP**

from sugar cane molasses

**Stronger Starts & Higher Yields**

# Stronger Starts & Higher Yields

## *Premium Orthophosphate*

MKP (monopotassium phosphate) delivers plant available phosphorus  
& promotes plant health

## *Uniform Emergence*

gentle approach to pop-up fertilizer ensures higher yield potential

## *Nutrient Accumulation*

significantly enhances early season plant vigor & nutrient uptake

## *Larger Roots*

access more nutrients by feeding biology in the rhizosphere
