

L-CBF PROOF POSITIVE

PP-839

ARIZONA ALFALFA TRIAL

Hart Brothers | Maricopa, AZ

TRIAL DETAILS

Product: L-CBF BOOST™

Crop: Alfalfa

Application Method: Sprayer

Application Timing: Every 3rd cutting

Application Date(s): December 12th, 2021 & May 7th 2022

Harvest Date: March 25th, 2022, May 27th, 2022 & July 19th 2022

SUMMARY

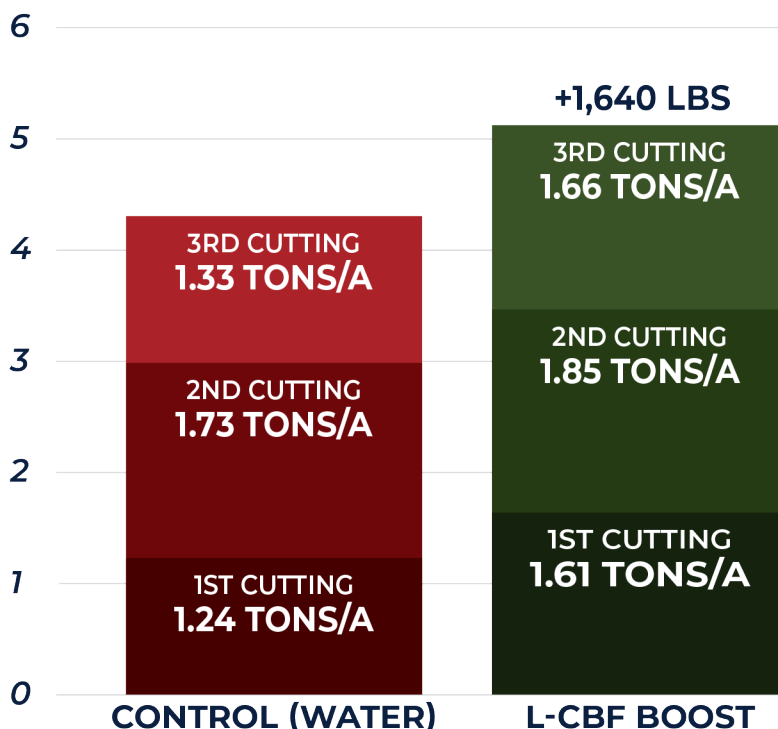

Arizona Alfalfa trial was conducted on three borders with three replications per border per treatment. The main goal of this Maricopa, AZ farm is producing more tonnage for the retail hay market. Positive results from just two applications of BOOST were sampled from 3 of 7 cuttings between December and July. Additional yield increased from all harvested crops could've contributed to the total of sampled results. Average increase per acre measured +550 more pounds of Dry Matter per cutting. Conditions over this time frame presented environmental challenges with varying temperatures including extreme heat. Trial fields utilize flood irrigation. Random replicated hand sampling were taken from 17" X 17" square. Samples were processed using independent forage testing lab.
