CARBON-BASED ALFALFA FOLIAR TRIAL

McBain, MI

TRIAL DETAILS

Product: L-CBF BOOST™ & L-CBF 7-21-3 MKP

Crop: Alfalfa

Application Method: Foliar

Planting date: August of 2021

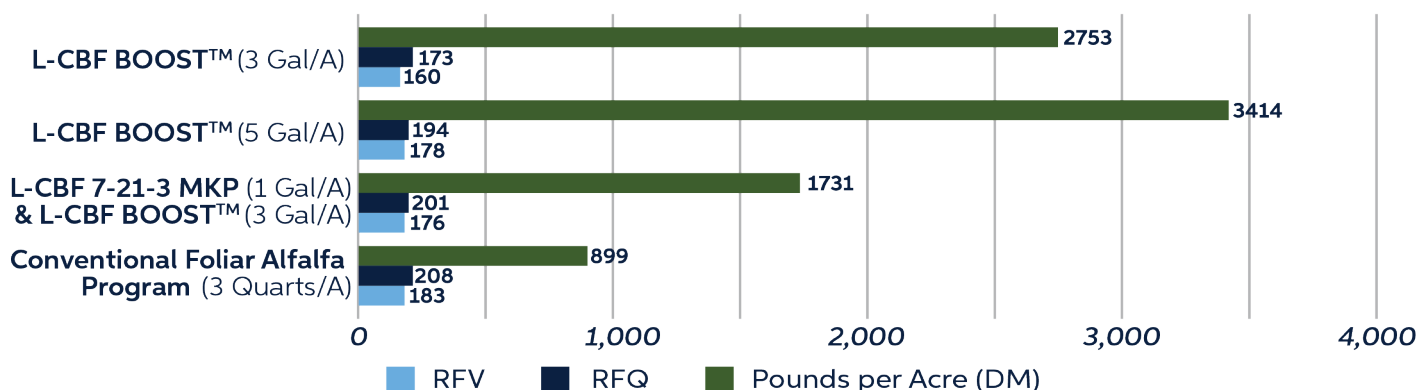

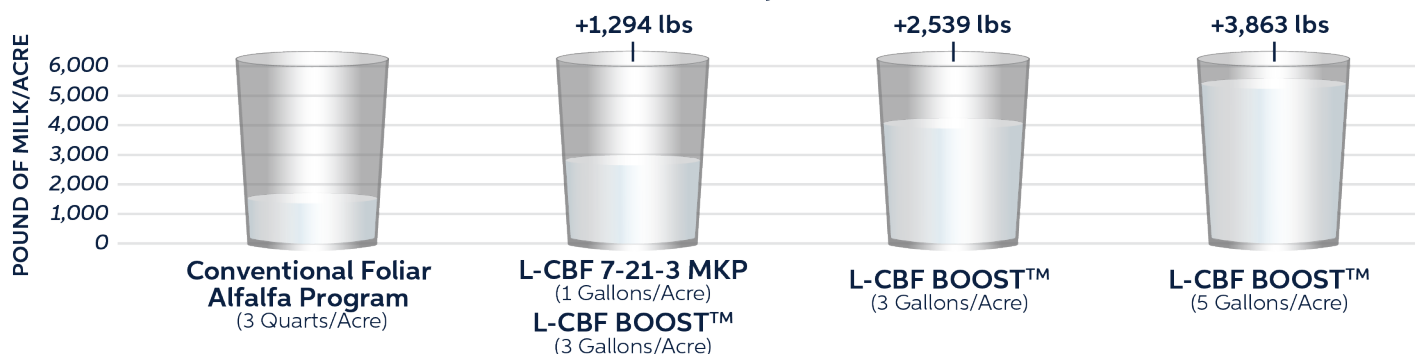

Application Date: June 24, 2023

Harvest Date: July 12, 2023

SUMMARY

This trial was designed to assess the response of alfalfa to the QLF Liquid-Carbon Based Fertilizer program compared to a conventional foliar alfalfa program, both utilizing 3 quarts/acre along with a chlorpyrifos insecticide. Treatments with L-CBF BOOST™ alone did not include any insecticide. The alfalfa treated with the carbon-based programs exhibited higher yields while maintaining quality feed values. Notably, there was a significant improvement in leaf retention, with dark green leaves observed throughout the entire plant. Foliar feeding alfalfa with QLF fertilizer proved to be effective in producing high-quality forage with impressive yields.
