

BEAT THE HEAT

KEEP YOUR CATTLE COMING TO THE BUNK

Maintaining dry matter intake during the heat of summer is a challenge.

There are several factors that may contribute to uneven or low DMI when heat stress is prevalent. Luckily, QLF liquid supplements provide an effective solution to heat stress symptoms such as ration sorting and palatability. QLF liquid supplements promote consistent intake of nutrients and additives by reducing cattle's ability to sort and increasing the palatability of the overall diet.
