

An aerial photograph of a yellow crop sprayer flying over a vineyard. The sprayer is positioned in the center, moving from the top towards the bottom of the frame. It is releasing a fine mist of spray onto the rows of grapevines below. The vineyard is composed of neat, parallel rows of green grapevines. A white circular graphic is overlaid on the left side of the image, containing the text 'FOLIAR FEEDING'. A blue chevron-shaped graphic points downwards from the bottom of this circle towards the three benefit icons below.

FOLIAR
FEEDING

REDUCES
DRIFT

IMPROVES
NUTRIENT INTAKE

REDUCES
PLANT STRESS

Why QLF?

QLF L-CBF products work as an excellent tank partner for feeding crop nutrients foliar and is compatible with most pesticide applications. Farmer tested and wind-tunnel validated, QLF L-CBF has demonstrated ability to stay on target and reduce drift. Feeding the plant a QLF L-CBF through foliar application reduces stress and physical injuries by softening chemistry and buffering out harsh salts while improving intake of nutrients and chemistry.
