

Low Moisture Block Management Tips

While blocks can free the producer from daily supplement delivery tasks, they do not eliminate the need for feeding management. Successful use hinges on proper placement, maintenance, and monitoring.

- Provide adequate available forages and energy at all times. Do not feed free choice to empty, energy starved cattle or other hungry livestock.
- Provide unlimited fresh, clean water. Once livestock are familiar with block, place block away from water supply and away from where animals congregate.
- In areas with extreme heat, place blocks in the shade.
- Intake of these supplements will vary, depending on the quality of forages, pasture conditions and/or nutritional need.

QLF Ignite Low Moisture Blocks (LMB) are convenient and easy-to-use to make certain your livestock are getting what they need - when they need it.

QLF Ignite™ Low Moisture Blocks

- Controlled, Consistent Consumption
- High Energy/Nutrient Dense
- Vitamin & Mineral Fortified
- Highly Palatable
- Increased Forage Digestion
- Weather Resistant
- Convenient/Labor Saving
