

# QLF SuprCoat

The premium coating product

## Use QLF SuprCoats with Confidence!

- *Products contain high sugar levels*
- *Superior coating characteristics*
- *Flexible product line to fit your needs*
- *Standardized pH level*

Custom levels of additives available:

- Flavors
- Surfactants
- Mold Inhibitors

## Why Use QLF SuprCoats?

- *Enhances appearance, aroma & palatability*
- *Flexible product line to meet variable environmental/manufacturing conditions*
- *Consistent products manufactured with high quality domestic cane molasses*
- *Standardized pH to improve handling, mixer maintenance, and reduce stickiness*

Custom products are available to meet your needs!

*Enhancing the value of your texturized feeds!*

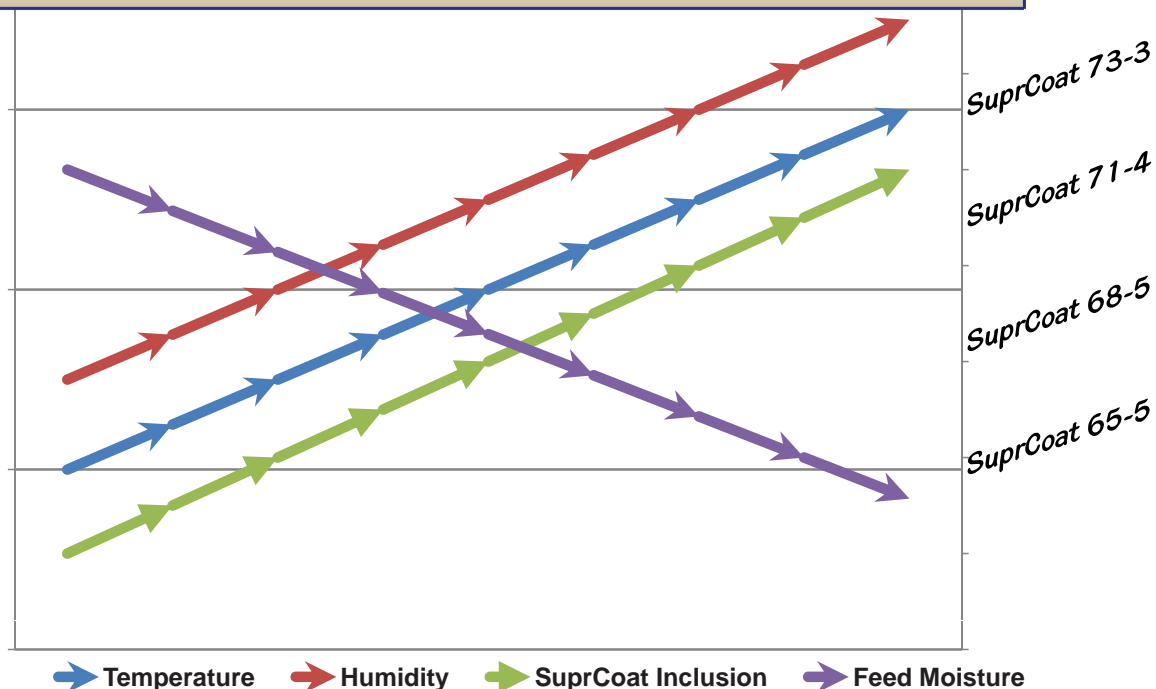

## • SuprCoat Product Line

SuprCoat products are available with varying levels of dry matter. Coating product dry matter affects feed moistness and appearance: higher dry matter SuprCoats help maintain feed moistness during warm months of the year.

### Choosing the Correct *SuprCoat*

Coating Product selection needs to account for variations in temperature, humidity, feed ingredient moisture, inclusion rate and desired end product appearance.

To maintain optimum Texturized Feed appearance, as temperature and humidity increase, select a higher dry matter and lower fat SuprCoat and vary inclusion rate to achieve desired results.

SuprCoat products contain varying levels of fat from high-quality vegetable fat. Fat helps to reduce feed's tendency to cake or brick, which is especially important in winter months.

## • Additive Options

QLF offers the following additives that can be added to a SuprCoat product to meet your specific needs.

- Organic acids - to aid in inhibition of molds and yeast.
  - Custom Mold Inhibitor
    - \*MYCO CURB®
    - \*Ultra CURB®
- \*Trademarks of Kemin Industries Inc, USA
- Caramel Flavor - to enhance palatability and aroma.
- Surfactants - to aid handling and flowability.
- Nutrient Additives - vitamins, micro minerals, and organic trace minerals can be added to QLF's Mill Products to conveniently mix and distribute into finished feeds.

Microbial stability of finished feeds is essential to feed safety, animal health, and consumer confidence. QLF SuprCoats are protected with preservatives. Additional preservatives may be included to meet your specific needs.

Mycos CURB® and Ultra CURB® are broad-spectrum mold inhibitors for addition to feeds and grains. Both can be custom added to QLF's Mill Products. They should be used consistent with Kemin Industries, Inc. recommendations:

Feed Storage Time	Up 2 Weeks	Up 4 Weeks	Up 6 Weeks
lbs. MYCO or Ultra CURB®/T Grain Mix	2 lbs.	4 lbs.	6 lbs.

NOTE: These recommendations apply to feed that is stored in sealed bags and is below 18.0% moisture content.
